

Pharmatech Oncology, Inc. provides Contract Research Organization (CRO) and Site Management Organization (SMO) services to oncology focused- pharmaceutical and biotech companies, as well as Data Management services to a broader market. Over the last 20 years, we have become experts at managing Phase I through Phase IV clinical trials, with services ranging from feasibility studies and protocol/study design to trial management and post study publications.

Within the oncology research segment, Pharmatech sustains a competitive advantage with our unique Just-In-Time enrollment program, as well as through the utilization of 1,250 contracted oncologists. Just-In-Time shortens the time it takes to enroll subjects into a clinical trial - mitigating risk, time and cost of conducting any given study.

Our data management services are designed to be flexible to meet the varying demands of each client. Ranging from study, CRF, and process design to dynamic monitoring and querying, our services provide a comprehensive solution uniquely tailored for each study, versus a one-size fits all approach. Our top-rated, web-based electronic data capture (EDC) system is custom planned for each project and can accommodate paper casebook trials. It features a secure and intuitive approach to accurate and consistent data collection in conjunction with dynamic monitoring, exceeding Good Clinical Practices (GCP) compliance requirements. Our biostatisticians have completed more than 100 abstracts, statistical reports and publications.

Pharmatech Oncology prides itself on quality of service, generating results and meeting strict timelines. We're flexible enough to meet the demands of even the most stringent of studies and are able to deliver on projects where our competitors simply fall behind.
